PROFESSIONAL SUMMARY

Backend Developer with 2 years of experience designing, developing, and deploying production backend systems using Python, Django, Django Ninja, PostgreSQL, Redis, Celery, and AWS. Experienced in building scalable REST APIs, implementing secure authentication systems, integrating payment gateways, and deploying cloud-native applications. Contributed to migrating a production platform from a monolithic architecture to a domain-based microservice architecture supporting growth from under 1,000 to over 3,000 users. Passionate about backend architecture, distributed systems, and building reliable software products.

TECHNICAL SKILLS

Languages & Frameworks	Python, Django, Django Ninja, FastAPI
Databases & Caching	PostgreSQL, Redis, Celery (Background Processing)
Security & Auth	JWT Authentication, Role-Based Access Control (RBAC), API Versioning
Cloud & DevOps	AWS (EC2, S3), Nginx, Gunicorn, CDN, Prometheus Monitoring
Integrations & Tools	Razorpay, Firebase Cloud Messaging (FCM), Git, OpenAPI/Swagger, Postman

PROFESSIONAL EXPERIENCE

GLOUP — Backend Developer (Freelance)	Feb 2026 – Present Chennai, India
- Migrated platform from legacy monolithic architecture to domain-based microservices, supporting scaling from under 1,000 to over 3,000 production users. - Participated in service decomposition, domain modeling, API migration strategy, and feature enhancement within a lean two-developer agile team. - Designed resilient backend APIs across independent business domains while maintaining platform stability throughout the migration lifecycle. - Built asynchronous processing workflows using Redis and Celery for high-throughput system notifications, cron jobs, and heavy operations. - Optimized backend execution patterns, reducing overarching API endpoint latency metrics by approximately 30%.	

THIRAN360AI — Junior Backend Developer	Jun 2024 – Jan 2026 Erode, India
- Developed and maintained reliable backend infrastructure for a production learning platform utilizing Django Ninja and PostgreSQL database engines. - Designed REST APIs supporting course management, automated enrollment, student assessments, content pipelines, and administrative dashboards. - Implemented secure JWT-based authentication mechanisms coupled with granular Role-Based Access Control (RBAC) web workflows. - Integrated Razorpay payment gateways to safely handle complex course subscriptions, incoming webhooks, and core transactions. - Configured Prometheus health metrics and logging collectors to optimize cloud-native system observability and runtime visibility.	

KEY PROJECTS

Learning Platform Backend — Aari Work & Training Institute	api.gloriousartcreations.com/api/v1/docs
- Developed complete backend ecosystem handling automated course enrollment, assessment matrices, dynamic contents, and administrative management tasks. - Designed and scaled safe system architectures using Gunicorn, Nginx, and AWS (EC2, S3 bucket stores, CloudFront CDN pipelines). - Engineered async notification and push pipelines using Celery task queues, Redis message brokers, and Firebase Cloud Messaging hooks.	

EDUCATION

Master of Computer Applications (MCA)	2023 – 2025
KSR College of Engineering	CGPA: 7.8 / 10.0
Bachelor of Science in Computer Science (B.Sc.)	2018 – 2021
Madras University	CGPA: 7.5 / 10.0
