

VEERIAPERUMAL K

Backend Engineer · Python / Django / FastAPI · AWS

Chennai, India | +91 8248628437 | ramanavalar2001@gmail.com | linkedin.com/in/veeriaperumal | github.com/veeriaperumal

PROFESSIONAL SUMMARY

Backend engineer with two-plus years of hands-on experience designing and shipping production systems for e-learning, marketplace, and business platforms. Comfortable owning the full backend lifecycle — from API design and database modelling through payment integration, async task pipelines, and cloud deployment. Particularly drawn to clean architecture, practical scalability, and keeping production systems reliable under real load.

TECHNICAL SKILLS

Languages & Frameworks: Python, Django, Django Ninja, FastAPI

Data & Background Jobs: PostgreSQL, Redis, Celery

Cloud & Infrastructure: AWS EC2, AWS S3, CloudFront, Gunicorn, Nginx

Auth & API Design: JWT, RBAC, API Versioning, OpenAPI / Swagger

Observability & Tooling: Prometheus, Grafana, Loki, Git, Postman

PROFESSIONAL EXPERIENCE

GLOUP · Backend Developer — Freelance

Feb 2026 – Present

- Led the restructuring of a live Django application into a domain-oriented modular architecture, making it significantly easier for the team to extend features without stepping on each other.
- Built and maintained the core backend services powering salon onboarding, booking workflows, real-time notifications, and day-to-day operational management.
- Helped the platform scale to handle over 300 bookings a day while steadily onboarding between 30 and 50 new salon partners each cycle.
- Introduced Celery and Redis for all asynchronous workloads — notifications, scheduled jobs, and background processing — keeping the synchronous request path clean.
- Identified and resolved a set of slow-query hotspots; combined with pagination improvements, the changes noticeably reduced API response times under load.
- Operated as a generalist within a lean engineering team: writing features, debugging production issues, and handling deployments all in the same sprint.

THIRAN360AI · Junior Backend Developer

Jun 2024 – Jan 2026

- Built the backend for a production learning platform from the ground up using Django Ninja and PostgreSQL, covering course enrollment, assessments, content delivery, and admin operations.

- Designed and implemented a JWT-based authentication system with role-based access control, giving instructors, students, and admins appropriately scoped permissions.
- Integrated Razorpay end-to-end: order creation, payment verification, and webhook handling, including edge-case reconciliation for failed or disputed transactions.
- Configured Prometheus and Grafana for application metrics and wired up centralised log aggregation with Loki, giving the team real visibility into system health.
- Participated in all production deployments on AWS, picking up solid operational habits around rollout safety and incident response.

PRODUCTION PROJECTS

Learning Platform Backend — *Glorious Art Creations*

Live platform: gloriousartcreations.com

API docs: api.gloriousartcreations.com/api/v1/docs

Responsible for the full backend: API design, course enrollment flows, assessment and content delivery, authentication, Razorpay payment integration, notification pipelines, and end-to-end AWS deployment across EC2, S3, and CloudFront. Stack: Django Ninja, PostgreSQL, Redis, Celery, Unicorn, Nginx.

Salon Marketplace Platform — *GLOUP*

API endpoint: api.v1.gloup.in

Built and maintained backend services for booking management, salon onboarding, notification workflows, and production optimisation. Platform serves 300+ daily bookings across 30–50 active salon partners.

Additional live deployments: ogholidays.co · mgmdryfruitsandnuts.com · fruitsandnuts.com · edvelinternational.com · api.codingboss.in

OPEN SOURCE

Django Architect *(In Development)*

A production-focused architecture toolkit for Django and Django Ninja. Designed to make it straightforward for engineering teams to adopt domain-oriented structure, service layers, event-driven workflows, and the kind of scalable patterns that show up in real production codebases rather than tutorials.

EDUCATION

Master of Computer Applications (MCA)

KSR College of Engineering

2023 – 2025

Bachelor of Science in Computer Science

University of Madras

2018 – 2021
